1 Although the AC software can be run in virtualised environments, Asset Control is not yet able to provide technical support for performance related problems
   in a virtualised environment. If you do choose to run in a VM, please ensure that you choose a VM with good IO throughput.
2 For the x86_64 and Sun SPARC 64 processors some AC Server utilities still require 32-bit C libraries. These utilities are not the core AC Server processes.
3 Limited support - only high priority production issues
4 Expected to be supported as of July 2020
5 MS SQL is only supported for RHEL and SUSE and not for Solaris.
6 UTF-8 is only supported in combination with Oracle and not with Sybase and MS SQL.
